Staff/Principal-level platform engineer with 25+ years driving reliability and automation across large-scale distributed, cloud-native, and IoT systems. Recently focused on governance-aware AI/ML and GenAI workflows integrated into production cloud platforms.

### Core Skills

Cloud Architecture, DevSecOps, Site Reliability Engineering, Kubernetes, Docker, Observability, AIOps, SIEM, Incident Response, CI/CD, IoT, Secure Software Development

### Professional Development

University of Texas at Austin - Apr 2025 – Present

- Applied AI and Data Science for Systems and Platform Decisioning
  - Post Graduate Program in Data Science and Business Analytics (Completed)
  - Artificial Intelligence and Deep Learning (In Progress)
  - IBM Generative AI Engineering (In Progress ETA May, 2026)

### Work Experience

**IBM - San Jose, CA — Senior Backend Engineer (DevSecOps / SRE) | Apr 2021– Apr 2025**

- Owned and evolved scalable backend services for cloud-native platforms, enabling telemetry-driven monitoring and automated remediation in production environments.
- Strengthened release reliability through CI/CD hardening, K8s deployment standardization, enhanced observability with Prometheus and Grafana.
- Engineered and maintained 200+ Python and Ansible automation tests, reducing regression risk and improving deployment confidence across platform releases.

**Exabeam - San Mateo, CA - Senior Software Quality Engineer (Security Analytics Platform) | Aug 2019– Mar 2021**

- Led reliability and validation engineering for security analytics platforms processing high-volume behavioral and event-driven data at scale.
- Designed automation frameworks to validate data ingestion pipelines, detection scoring logic, and threat classification workflows across distributed environments.
- Improved release stability and detection accuracy by strengthening test coverage and ensuring integrity of data-driven security models.

**Oracle (OCI) - San Jose, CA - Principal Software Engineer | May 2018– Jul 2019**

- Architected multi-tenant leaf-spine network infrastructure across 20+ global data centers and delivered automation microservices enabling scalable OCI cloud region expansion.

**Light - Redwood City, CA - Senior Software Quality Engineer | Jun 2017 – Apr 2018**

- Engineered automation frameworks for performance and reliability validation of the L16 computational photography system, supporting firmware-to-application integration across Android-based environments.

**Silver Spring Networks - Redwood City, CA - Senior SDET - Nov 2012 – May 2017**

Engineered CI-driven reliability and automation frameworks for IoT/smart grid platforms supporting 23M+ production devices, strengthening firmware-to-cloud deployment stability, telemetry integrity, and fleet-scale system reliability.

**Redwood Systems - Fremont, CA - Senior SDET - Jan 2011 – Oct 2012**

- Led system integration and automation for sensor-driven smart lighting platforms used in green building environments.

**CDNetworks Senior - San Jose, CA - QA Manager Aug 2009 – Dec 2010**

- Led reliability and validation strategy for globally distributed CDN infrastructure, strengthening performance, scalability, and data integrity across large-scale edge networks.

### Education

Masters in Computer Management (1993-1995) | Bachelors in Computer Science University of Pune, India
